

# for camps FAQs

---

## 1. What is neffy and who can use it?

neffy is a needle-free nasal spray used for the emergency treatment of allergic reactions, including anaphylaxis. It is approved for adults and children aged 4 years and older who weigh at least 33 pounds.

## 2. What is the dosing for neffy?

- **1 mg dose** for children weighing **33 to 66 pounds**
- **2 mg dose** for individuals weighing **66 pounds or more**

Each prescription pack contains two nasal sprays. No trainer device is included.

## 3. Why is neffy more expensive than other epinephrine auto-injectors?

While neffy may have a higher upfront cost compared to other epinephrine auto-injectors, its longer shelf life results in a lower cost per season.

Traditional auto-injectors typically expire after just one camp season, whereas neffy offers an extended shelf life lasting multiple summers:

- **2 mg:** 30 months
- **1 mg:** 24 months

## 4. How should neffy be stored?

Store at room temperature between 68°F and 77°F, and avoid freezing. neffy is more stable at higher temperatures than epinephrine in auto-injectors, and can tolerate high temperatures up to 122°F for a few days if necessary.

## 5. How can I learn to properly use neffy?

It's important to be familiar with how to use neffy before an emergency occurs. Visit [www.neffy.com/how-to-use](http://www.neffy.com/how-to-use) for step-by-step instructions and demonstration videos.

## 6. How do I order neffy?

Visit [www.CampEpi.com](http://www.CampEpi.com) for a quote. After placing an order, CampDoc will send you a Prescription Drug & Device Authorization Form that must be completed by a licensed prescriber. Orders will only be fulfilled after this form is received.
